

Glass

Helping to celebrate life's
great moments.

ororagroup.com

So good we bottle it

We are experts at crafting sophisticated, stand out glass bottles that build on the brand strategies of our customers. We collaborate with you to deliver on the promise of what's inside.

Our passion is producing high quality glass packaging solutions. Our state-of-the-art glass facility produces bottles for all beverage types from beer, wine, cider and alcoholic ready-to-drink styles to carbonated soft drinks and juices.

With a passionate team of specialist glass engineers, we offer fully customised glass bottle specifications and packaging. We also import bottles for customers requiring smaller quantities or specific custom designs. Together we work with you to ensure our bottles perform optimally throughout the entire supply chain from manufacture through to final consumption.

What we do

With over 30 standard bottle designs and seven glass colours to choose from, we offer diverse and inspired glass bottle selections from 330mL beer bottles to 1.5L wine magnums. Beyond our standard bottle range, we also work with customers to create bespoke bottle solutions of any form, size or design. We aspire to make the seemingly impossible, possible.

Orora's state-of-the-art glass manufacturing facility in South Australia is one of the largest glass plants in the southern hemisphere. Working with our global partners, we maintain a definitive focus on leading the market with high quality and innovative glass packaging solutions.

Wine bottles

As one of Australia's leading glass bottle manufacturers, we provide complete packaging solutions for winemakers all across the asia-pacific region. We proudly support any size producer, from small boutique wineries through to multinational brands and global wine distributors. Our range covers claret, burgundy, sparkling, riesling and fortified, with several sizes, colours and closure finishes to choose from.

Beer bottles

Our glass facility in South Australia also manufactures stock and custom designed bottles for beer and cider. With multiple designs available in amber and green glass, we work with you to ensure you find the right bottle to suit your brand and product requirements. We can also help you create your perfect bottle design through embossing, shrink sleeving or exploring our imported bottle range.

Carbonated beverage bottles

We offer a versatile range of imported standard beverage bottles. We also work with customers to develop proprietary ranges for specific lines and product releases.

Untap your brand potential

Providing quality glass bottles is only part of what sets us apart. A recognised benefit of working with Orora is our ability to customise your product and create complete beverage packaging solutions to suit your brand personality.

Embossing and debossing

Creating a unique bottle design is easy using our embossing and debossing expertise. Bring your brand to life through creative designs that can be applied to the neck, shoulder, label panel and base of any bottle.

Shrink sleeve technology

Printed shrink sleeves take your brand to the next level by using 100% of the surface area to transform any bottle into a powerful marketing tool. Tell your brand story through 360 degrees of marketing space wrapped around your entire bottle. Shrink sleeves utilise a vast array of printing technologies including thermochromic, UV, metallic, illuminating and fluorescent inks, which create visually pleasing results such as frosted, tactile, holographic and embossed looks.

Anti-counterfeit technology

With counterfeiting and product tampering on the rise, we work closely with our customers to protect brand reputation and ensure consumer safety through sophisticated anti-counterfeit technology. Brand owners and consumers can easily identify fake products and this technology can be applied across large and small scale promotions.

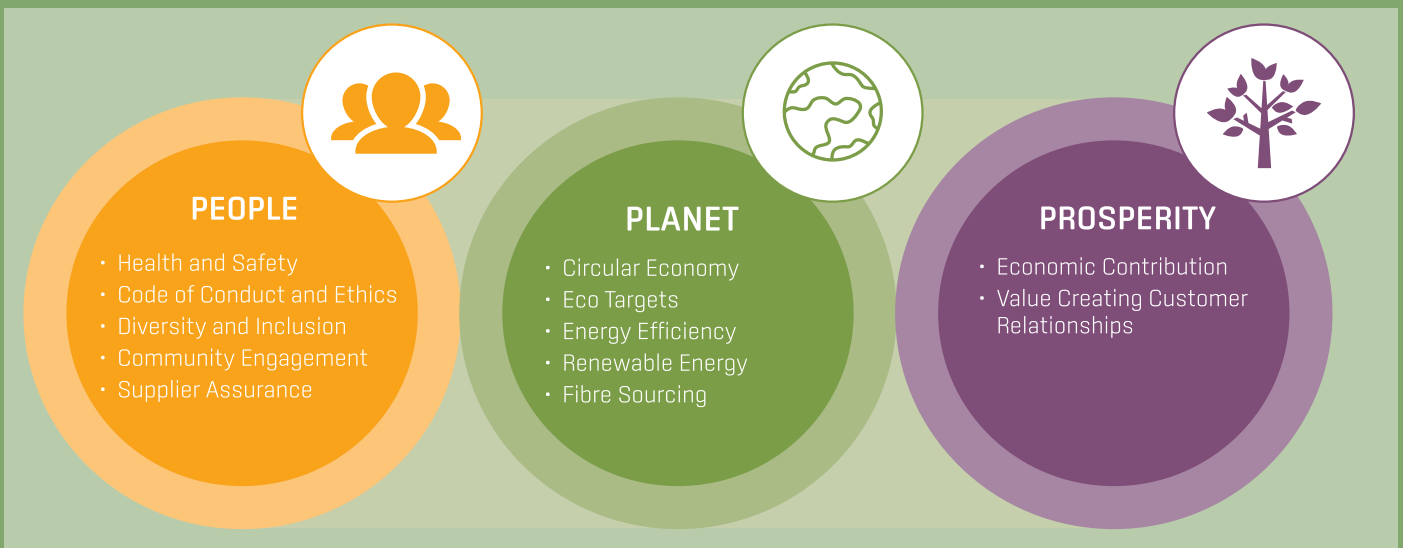

Imported bottles and custom designs

In addition to the suite of glass bottles in this catalogue, we offer a versatile range of imported standard beverage bottles. We are also happy to work with you to develop a proprietary range for your products.

Orora's approach to sustainability

Sustainability at Orora is managed through three focus areas: People, Planet and Prosperity. Through these areas Orora works closely with customers and vendors to improve the sustainability outcomes of the products and services it provides. Orora does this by focusing on the ways in which packaging can be manufactured for the customer, collected for recycling and manufactured back into new packaging that is then returned to the customer.

People

Health and safety

A commitment to keeping people safe is a core value for Orora team members. Orora's long-term safety objectives are focused on Leadership, Risk management, Safety standards, plant and equipment design and capability.

Diversity and Inclusion

Orora is strongly committed to developing an inclusive and respectful work environment, to optimise diversity of thought and background. This is supported by the Champions of Change network, and the Women in Leadership at Orora (WILO), which look to growing and developing diverse talent now and in the future.

Planet

Circular Economy

A large focus for Orora is working towards the principles of a circular economy. This means making packaging that is both made from recycled content and is recyclable while staying fit-for-purpose.

Orora's Gawler Glass Manufacturing plant in South Australia is a significant user of recycled glass (cullet), in Australia. The plant currently consumes approximately 80% of cullet derived from the South Australian container deposit scheme.

Orora's cans, ends and wine closures are manufactured from Aluminium, which contains up to 70% recycled content. Aluminium is 100% recyclable and requires only 5% of

energy used to create virgin aluminium, with no loss of properties or quality during the recycling process.

Renewable energy

Orora is driving its commitment to a low emissions future via two long-term power purchase agreements for renewable wind energy in Australia. These agreements, from Clements Gap, South Australia, and Lal Lal, Victoria, will provide equivalent to 80% of Orora's total electricity demand in Australia, including South Australian and New South Wales, where Orora has its largest and most energy intensive plants.

Prosperity

Economic contribution

Orora strives to generate Prosperity by making a significant economic contribution to the communities in which it operates through employment opportunities and, value chain partnership, and in balance with the people and prosperity initiatives we undertakes along its sustainability journey.

Manufacturing Footprint

Our glass manufacturing facility follows Good Manufacturing Practices (GMP) and is accredited with the following GMP for packaging of food and beverage and HACCP (PAS223 and ISO22000), OH&S (AS/NZS 4801:2001), Environmental Performance (ISO 14001) certifications.

Orora glass bottles are manufactured from a mix of virgin raw materials with significant recycled content. Orora glass bottles are also infinitely recyclable without any compromise on quality.

Orora at a glance

At Orora we believe packaging touches lives. Together we deliver on the promise of what's inside. Orora is a global business with a proud Australian heritage. Orora works closely with customers to provide an extensive range of tailored packaging and visual communications solutions. Every day, millions of consumers buy and use goods in packaging proudly designed, developed, produced or supplied by Orora.

Orora's Australasian region is home to Orora Beverage. Orora Beverage provides market-leading solutions for the beverage industry and has particular specialisation in glass bottles, aluminium cans and closures.

Orora Beverage

Orora Beverage is made up of three business units:

Orora Beverage Cans

Orora Beverage Cans is a market leader in primary metal packaging for beverages. To meet the changing needs of customers, we manufacture a broad range of aluminium cans including classic cans, sleek cans and slimline cans. Cans can be enhanced with innovative options, such as shaped and/or embossed cans and use of thermochromic, fluoro and tactile inks to create a striking and enhanced brand presence from all beverage occasion from carbonated soft drinks, beer and wine.

Orora Glass

Orora is a leading supplier of innovative glass packaging solutions. From our world-class glass manufacturing facility in Gawler, South Australia we produce an array of glass bottles in a variety of colours to support the brand strategies of our customers. With a definitive focus on high quality, creative glass packaging solutions, we offer standard wine and beer bottles, as well as custom designs and innovative glass bottle sleeving.

Orora Closures

We deliver a diverse range of aluminium and plastic closures to leading beverage brands. Our focus is on product integrity, functionality and innovation. We have unrivalled expertise working with customers to create closures that integrate into their packaging requirements with ease.

Engineering and technical support

While the supply of quality wine closures and can ends is an integral part of our business, machinery supply and maintenance brings our product to life. Orora maintains global alliances with recognised machinery technology partners and suppliers such as Ball Corporation, Pelliconi, Zalkin, Global Closure Systems and Crown Packaging to ensure our customers have access to the best capping solution for your wine (including Barokes "Vinsafe" technology) or beverage operations.

Orora's specialist Customer Engineering Services and Design (CESD) team is available to assist our customers in their packaging production. Working closely with our customers, our experienced service engineers can modify, design and upgrade existing steam vacuum capping and can end seaming machines. We also refurbish second hand or existing equipment, offering a cost-effective alternative for the purchase of capping equipment.

Orora CESD can also support you with:

- Audit of your equipment and maintenance program
- Adjustment of machines and distributors as required
- Operator training and problem solving techniques
- Equipment modification and optimisation to enhance line performance
